

K SRI HARSHA VARDHAN

✉ ksriharsh7@gmail.com | LinkedIn: <https://www.linkedin.com/in/k-sri-harsha-varadhan-88603a301/>

PROFILE SUMMARY

Aspiring Data Analyst with a strong foundation in SQL, C programming, and data structure, and hands-on project experience across data processing, dashboarding, and database-driven applications. Skilled at importing, cleaning, and analyzing datasets to generate actionable insights, with practical exposure to Power BI dashboard design, cloud-based data pipelines on Microsoft Azure, and relational database optimization using MySQL. Strong analytical and problem-solving ability, built through continuous self-learning and coding practice, with a keen interest in turning raw data into clear, decision-ready insights.

EDUCATION

Koneru Lakshmaiah University (KL University)

July 2023 - May 2027

Bachelor of Technology in Computer Science and Information Technology (CS&IT) — CGPA: 8.52 / 10, Vijayawada, Andhra Pradesh

TECHNICAL SKILLS

- **Data Analysis & Visualization:** Power BI, Excel, Dashboard Design, Data Cleaning, Data Interpretation
- **Databases & Querying:** SQL, MySQL, Hibernate ORM, Database Optimization
- **Cloud & Data Engineering:** Microsoft Azure (data storage, integration, real-time processing)
- **Programming & Core CS:** C Programming, Python, Data Structures & Algorithms
- **Web Development:** HTML, basic full-stack exposure (Spring Boot, React)
- **Soft Skills:** Team Collaboration, Effective Communication, Analytical Thinking

PROJECTS

Weather Forecasting and Analysis System / *Microsoft Azure, Power BI*

March 2026

- Built a cloud-based weather analytics system, importing and processing historical and real-time datasets to generate insights on temperature, rainfall, humidity, and atmospheric trends.
- Designed interactive Power BI dashboards to visualize weather trends, climate patterns, and forecast performance metrics for end users.
- Applied real-time data processing techniques to improve forecasting accuracy and surface meaningful patterns from large-scale datasets.
- Utilized Azure cloud services for secure data storage and integration, enabling efficient handling of large-scale weather data.

Music Streaming Platform / *Spring Boot, React, MySQL*

December 2025

- Designed and queried a MySQL database to support song catalog browsing, playlist creation, and user management, using Hibernate ORM to optimize data retrieval.
- Improved query performance and data access speed, reducing latency for song retrieval and overall application responsiveness.
- Structured relational data models for users and content to support efficient reporting and scalable data access.

Car Rental Management System / *Docker, Jenkins, Kubernetes*

November 2026

- Built data-driven backend modules for vehicle booking, customer registration, and payment processing, supporting structured operational reporting.
- Implemented CI/CD pipelines using Jenkins to ensure reliable, consistent delivery of data and application updates.
- Automated development, testing, and deployment workflows using DevOps tools to maintain data integrity across releases.

EXTRACURRICULAR ACTIVITIES

- Participated in hackathons and team-based technical events, including data-focused challenges.
- Practiced problem-solving and query writing on coding platforms to strengthen analytical skills.
- Took part in group discussions and presentations to improve data storytelling and communication skills.
